January 31, 2019

The Honorable Gavin Newsom
Governor, State of California
State Capitol
Sacramento, CA 95814

Dear Governor Newsom:

We are writing to thank you for proposing to allocate \$24.5 million to complete the cleanup of 2,500 residential properties near the Exide Technologies (Exide) facility and \$50.0 million to expedite the cleanup of 700 additional residential properties in the 1.7-mil Preliminary Investigation Area (PIA) in your Fiscal Year 2019-20 Proposed State Budget.

For decades, the Exide lead-acid battery recycling plant emitted toxic substances known to be harmful such as lead, arsenic, antimony, and other substances into the air above the City of Vernon, contaminating an estimated 10,000 residential parcels within the PIA and exposing thousands of nearby residents and workers to lead. Exposure to lead and other toxic substances poses significant health consequences, such as asthma, and developmental and behavioral disorders in young children.

In 2015, a \$176.6 million State General Fund loan was appropriated to the Department of Toxic Substances Control (DTSC) to conduct soil sampling and to clean up 2,500 residential properties in the PIA. In 2018, DTSC released its Exide Residential Cleanup Plan, which outlined how DTSC would prioritize properties for cleanup. To date, approximately 590 residential parcels have been cleaned.

Over the last four years, the County has been advocating for additional funding to complete the cleanup of the communities surrounding the Exide Facility. It is estimated that approximately \$490.0 million additional dollars, at a minimum, are needed to clean up the 7,500 remaining contaminated residential properties in the PIA, making the allocation of additional resources necessary.

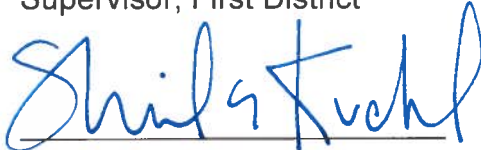

The Honorable Gavin Newsom
January 31, 2019

Sacramento, CA 95814

Dear Senator Stern:

We are writing in strong support of the Governor's Fiscal Year 2019-20 State Budget Proposals to allocate \$24.5 million to complete the cleanup of 2,500 residential properties near the Exide Technologies (Exide) facility and \$50.0 million to expedite the cleanup of 700 additional residential properties in the 1.7-mil Preliminary Investigation Area (PIA).

For decades, the Exide lead-acid battery recycling plant emitted toxic substances known to be harmful such as lead, arsenic, antimony, and other substances into the air above the City of Vernon, contaminating an estimated 10,000 residential parcels within the PIA and exposing thousands of nearby residents and workers to lead. Exposure to lead and other toxic substances poses significant health consequences, such as asthma, and developmental and behavioral disorders in young children.

In 2015, a \$176.6 million State General Fund loan was appropriated to the Department of Toxic Substances Control (DTSC) to conduct soil sampling and to clean up 2,500 residential properties in the PIA. In 2018, DTSC released its Exide Residential Cleanup Plan, which outlined how DTSC would prioritize properties for cleanup. To date, approximately 590 residential parcels have been cleaned.

Over the last four years, the County has been advocating for additional funding to complete the cleanup of the communities surrounding the Exide Facility. It is estimated that approximately \$490.0 million additional dollars, at a minimum, are needed to clean up the 7,500 remaining contaminated residential properties in the PIA, making the allocation of additional resources necessary.

The Honorable Henry Stern
January 31, 2019

Dear Assembly Member Holden:

We are writing in strong support of the Governor's Fiscal Year 2019-20 State Budget Proposals to allocate \$24.5 million to complete the cleanup of 2,500 residential properties near the Exide Technologies (Exide) facility and \$50.0 million to expedite the cleanup of 700 additional residential properties in the 1.7-mil Preliminary Investigation Area (PIA).

For decades, the Exide lead-acid battery recycling plant emitted toxic substances known to be harmful such as lead, arsenic, antimony, and other substances into the air above the City of Vernon, contaminating an estimated 10,000 residential parcels within the PIA and exposing thousands of nearby residents and workers to lead. Exposure to lead and other toxic substances poses significant health consequences, such as asthma, and developmental and behavioral disorders in young children.

In 2015, a \$176.6 million State General Fund loan was appropriated to the Department of Toxic Substances Control (DTSC) to conduct soil sampling and to clean up 2,500 residential properties in the PIA. In 2018, DTSC released its Exide Residential Cleanup Plan, which outlined how DTSC would prioritize properties for cleanup. To date, approximately 590 residential parcels have been cleaned.

Over the last four years, the County has been advocating for additional funding to complete the cleanup of the communities surrounding the Exide Facility. It is estimated that approximately \$490.0 million additional dollars, at a minimum, are needed to clean up the 7,500 remaining contaminated residential properties in the PIA, making the allocation of additional resources necessary.

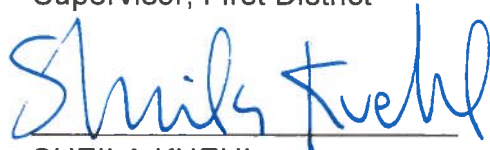

The Honorable Chris Holden

In 2018, DTSC released its Exide Residential Cleanup Plan, which outlined how DTSC would prioritize properties for cleanup. To date, approximately 590 residential parcels have been cleaned.

Over the last four years, the County has been advocating for additional funding to complete the cleanup of the communities surrounding the Exide Facility. It is estimated that approximately \$490.0 million additional dollars, at a minimum, are needed to clean up the 7,500 remaining contaminated residential properties in the PIA, making the allocation of additional resources necessary.

The Honorable Christy Smith
California State Assembly
State Capitol, Room 2002
Sacramento, CA 95814

Dear Assembly Member Smith:

We are writing in strong support of the Governor's Fiscal Year 2019-20 State Budget Proposals to allocate \$24.5 million to complete the cleanup of 2,500 residential properties near the Exide Technologies (Exide) facility and \$50.0 million to expedite the cleanup of 700 additional residential properties in the 1.7-mil Preliminary Investigation Area (PIA).

For decades, the Exide lead-acid battery recycling plant emitted toxic substances known to be harmful such as lead, arsenic, antimony, and other substances into the air above the City of Vernon, contaminating an estimated 10,000 residential parcels within the PIA and exposing thousands of nearby residents and workers to lead. Exposure to lead and other toxic substances poses significant health consequences, such as asthma, and developmental and behavioral disorders in young children.

In 2015, a \$176.6 million State General Fund loan was appropriated to the Department of Toxic Substances Control (DTSC) to conduct soil sampling and to clean up 2,500 residential properties in the PIA. In 2018, DTSC released its Exide Residential Cleanup Plan, which outlined how DTSC would prioritize properties for cleanup. To date, approximately 590 residential parcels have been cleaned.

Over the last four years, the County has been advocating for additional funding to complete the cleanup of the communities surrounding the Exide Facility. It is estimated that approximately \$490.0 million additional dollars, at a minimum, are needed to clean up the 7,500 remaining contaminated residential properties in the PIA, making the allocation of additional resources necessary.
